COMPANY HISTORY

Australian Electric Vehicles (AEV) has evolved from a small amusement ride manufacturing business in 1983 to a company that manufactures high quality specialised equipment for industry and businesses. The business grew rapidly due to the success of the amusement ride manufacture, and then turned to commercial electric vehicles and adapted some of the amusement technology to its electric vehicles – hence the present name of Australian Electric Vehicles.

From this point forward, the company quickly became involved in some big projects, for example it supplied 5 trains to World Expo 88 for people moving and on-site litter removal.

An association with Warner Bros Movie World was then established and the company went on to build many rides and street parade vehicles for both the WBMW Gold Coast QLD and

WBMW Düsseldorf Germany venues. Soon after this, AEV started manufacturing Dark Rides and motion theatres for several venues in China.

In the mid 1990s the company became involved in the manufacture of the HILITE portable lighting towers, which have since been used extensively throughout Australia and in Indonesia. The HILITE range is now recognized as one of the largest manufacturers of portable light towers in Australia. A more recent development is the HILITE Variable Message Board, which is proving highly successful and a leader in its field. The message boards and light towers were both used in significant numbers at the 2000 Sydney Olympics.

The company has conducted many successful export ventures into countries such as the UK, Germany, New Zealand, China, Indonesia, Malaysia, and Singapore. With high profile customers such as Coates Hire in Australia and Indonesia, Atlas Copco Hire, Theiss Contractors, Premier Hire, Warner Bros Movieworld in Australia and Germany, Muchpower

China, Tony Quirk Amusements [Darling Harbour and Stadium Australia], G & H Walkom [Botanical Gardens, Sydney], Toboggan Hill Park [Nelson Bay, NSW], Fantasy Glades [Port Macquarie, NSW], Driveworld [Pacific Fair, Qld], Sydney Olympic Park Authority [Homebush Bay, NSW] and many more are a statement to the company's success.

*A fully Australian
owned and operated
company.*

AEV is presently developing some exciting new products to add to its impressive list of achievements. A commitment in areas of innovative design, engineering excellence and affordability will continue successfully as it has done in the past

AEV products come with a twelve months warranty on new products. We offer new product advice for the client's need. Our after sales service offers technical advice when required and spare parts backup is second to none.

PRODUCT SUMMARY

Mobile Lighting Systems

The HILITE Light Towers have been designed after consultation with the hire companies, their clients and the mining industry using readily available components and materials for ease of repair and low cost of maintenance.

The HILITE range of towers has a proven track record with its extensive use throughout construction sites in Indonesia and various site applications throughout Australia. With its durability and reliability, the HILITE range keeps attributing to its own success. It has the history of a proven track star in its field.

The standard HILITE range is available in 4000, 6000, and 8000 watt configurations.

PRODUCT SUMMARY (CONT)

Mobile Message Systems

Our new generation mobile VMS takes advantage of leading edge technologies to provide full graphics capability utilizing modern LED technology and GSM/CDMA modem control.

The board's full graphics capability allows for the display of symbols, figures, and animation as well as standard text simultaneously.

The system is solar powered with smart diesel back-up giving you a leading edge mobile messaging system that requires very low maintenance and provides long operating life in the most extreme of weather conditions.

The board's wide viewing angle, plus automatically adjusted LED intensity provides the best possible readability under most climatic conditions.

Themed People Movers

Our people mover vehicles can be powered electrically, or by fuel (gas, petrol, or diesel).

The vehicles can be configured to suit any application, from mass transit type to small specialised themed transportation vehicles.

Typically, the vehicles can carry up to 50 people utilising multiple carriages.

All carriages utilise four-wheel steering with optional Ackerman steering on some to ensure accurate vehicle tracking for safety and driveability. All our themed transportation vehicles are speed limited to allow use alongside pedestrians. An example of this is our trackless train themed vehicle running within Darling Harbour, Sydney and also a regular mode of transport for patrons at the Sydney Royal Easter Show each year.

Electric People Movers & Tow Vehicles

These electric driven vehicles are designed to move equipment and supplied within enclosed spaces such as warehouses and within hospitals.

Typical uses include, transportation of food and drugs within a hospital, towing of a garbage collection trailer for use within shows etc..

These vehicles have also been modified to incorporate seating for up to 7

passengers to transport people within enclosed buildings. Some examples of this application is airport transfers, shuttle service around trade shows, and nursing homes.

In the nursing home configuration, special seating configurations are provided to maximise access for the elderly and also reduced vehicle height to facilitate entry by the elderly and mobility impaired.
